I used MintyEmailTester.com to send the HTML email and test how it appears in an email client.

### **Email Client Testing Notes**

- 1- Images: Images did not appear in the email because they are stored in GitHub repository files and not hosted as direct public image URLs, so the email client could not load them.
  
- 2- Button Hover: When hovering over the “Visit CSUN Website” button, the color changes to red, but the shadow and lift effect did not appear in the email client.
  
- 3- Checkbox Interactivity: The checkbox interaction did not work inside the email.
